

ABSTRACT OF THE DISCLOSURE

A combination eye and ear protection apparatus includes an eye protection portion which includes respective ends, an ear protection portion which includes a pair of ear-covering portions, and a pair of bridge portions connected between the respective ends of the eye protection portion and outer portions of the respective ear-covering portions. The eye protection portion includes a frame which includes frame ends, and lenses are received in the frame. The bridge portions include VELCRO bridge-to-ear-cover connectors and the ear-covering portions include complimentary VELCRO ear-cover-to-bridge connectors. With the combination eye and ear protection apparatus of the invention both ear protection and eye protection are provided for a wearer without the eye protection assembly interfering with good ear protection.
